FITTRACK CASE STUDY

THE OPPORTUNITY	MY APPROACH	THE OUTCOME
Connect motivation with clear, repeatable daily actions.	Bring UX reasoning and interface decisions together.	A cohesive mobile screen set with a prioritized validation plan.

01 / Project overview

FitTrack is a mobile fitness experience connecting onboarding, activity and personal progress.

DESIGN CHALLENGE

I focused on making the journey from first launch to everyday activity feel clear, encouraging and connected.

DESIGN OBJECTIVE

Bring goal setting, account access, daily tracking, profile tools and workout completion into one consistent experience.

SCOPE Mobile app concept • Supplied FitTrack screens • UX analysis and next-step validation plan

02 / UX framing & design rationale

I organized the experience around a simple progression: discover, get started, act, and reflect.

01 DISCOVER	02 GET STARTED	03 ACT	04 REFLECT
Welcome + onboarding	**Registration + login**	**Home + activity**	**Profile + progress**
Understand the product promise	Access the experience	Review targets and record activity	Review progress and completion

DESIGN PRINCIPLES

CLARITY	Make the next action and progress state easy to understand.
MOTIVATION	Use supportive language and positive completion feedback.
CONTROL	Keep account and personal progress actions understandable.
ACCESSIBILITY	Design for legibility, touch interaction and clear status cues.

03 / Research & UX considerations

Established behaviour-design and usability principles informed the questions for the next iteration.

BEHAVIOUR DESIGN

The Fogg Behavior Model emphasizes motivation, ability and prompts. For FitTrack, this points to visible, low-friction next actions.

www.behaviormodel.org/home

PHYSICAL ACTIVITY CONTEXT

WHO guidance supports manageable starts and gradual progress. The experience should encourage consistency without all-or-nothing framing.

www.who.int/health-topics/noncommunicable-diseases/physical-activity

USABILITY REVIEW

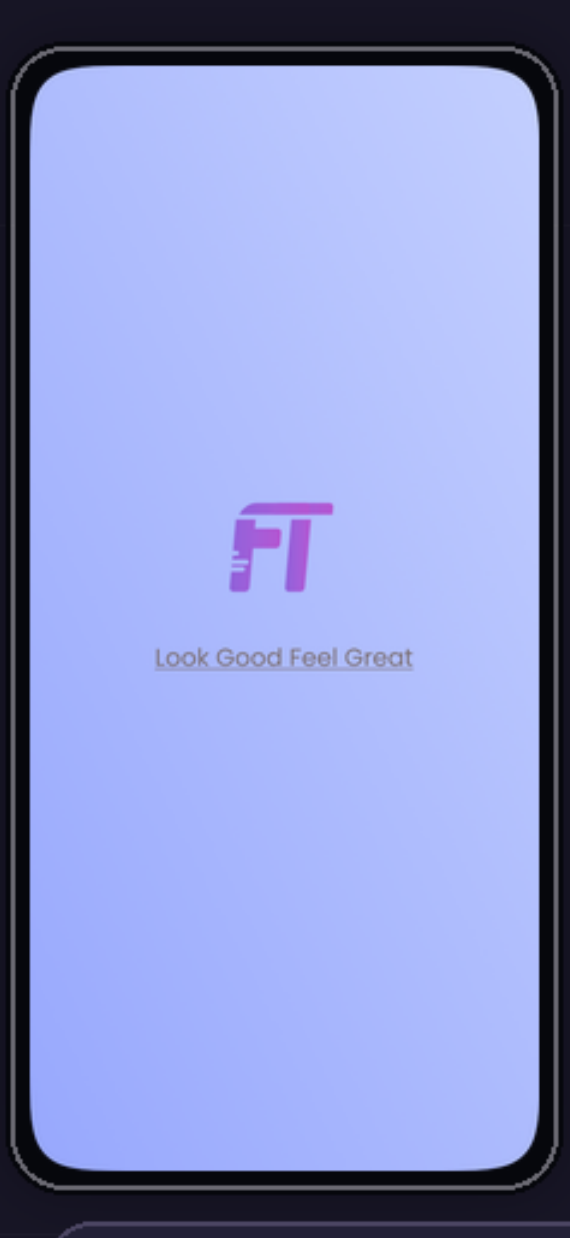
Heuristic evaluation considers clarity, consistency, feedback and user control. These informed the screen-by-screen review.

www.nngroup.com/articles/how-to-conduct-a-heuristic-evaluation/theory-heuristic-evaluations/

EVIDENCE NOTE No user interviews, analytics or usability results were supplied; user needs and friction points are hypotheses for validation.

04 / First impression & onboarding

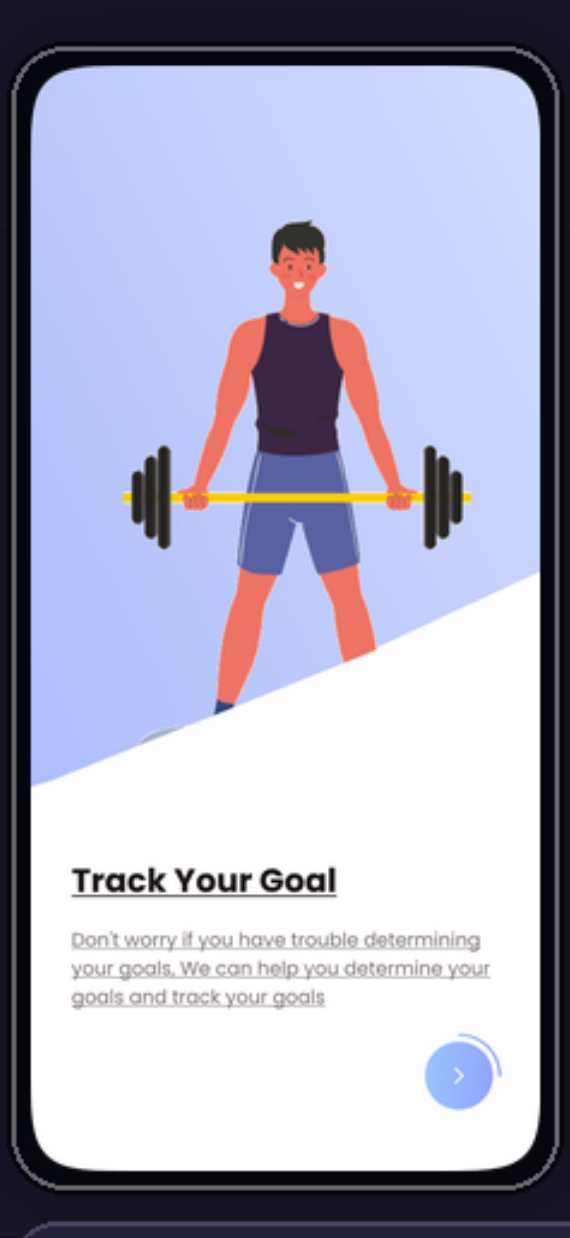
Friendly illustrations and focused screens introduce goals, movement and nutrition.



FT
Look Good Feel Great

WELCOME

Communicate the app promise and a clear next step.

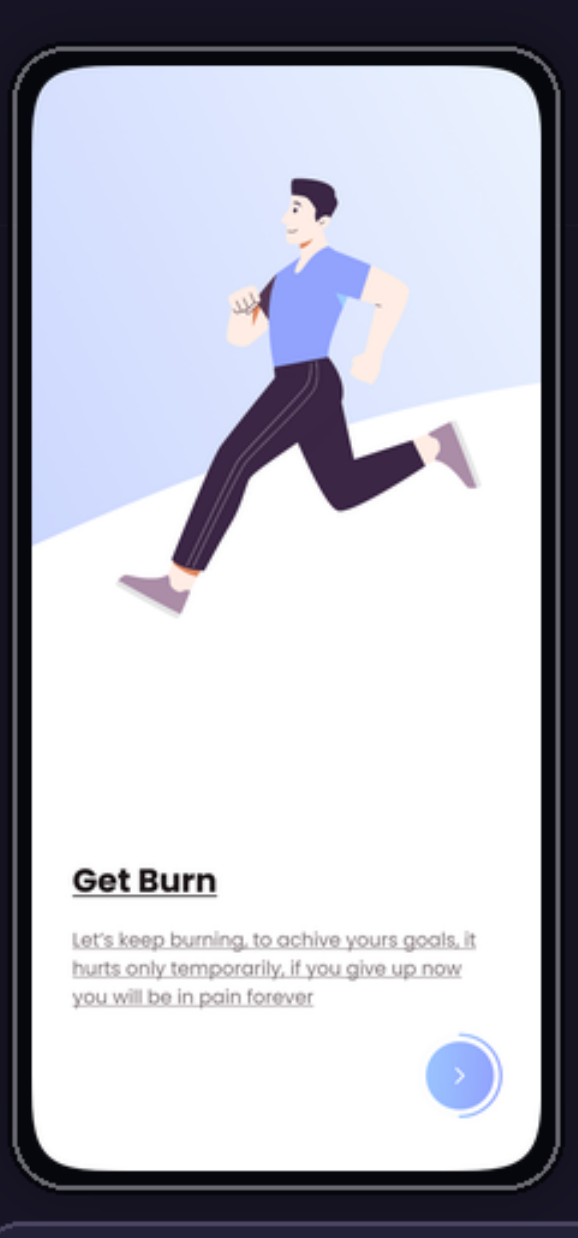


Track Your Goal

Don't worry if you have trouble determining your goals, We can help you determine your goals and track your goals

GOAL

Make goal selection understandable and achievable.

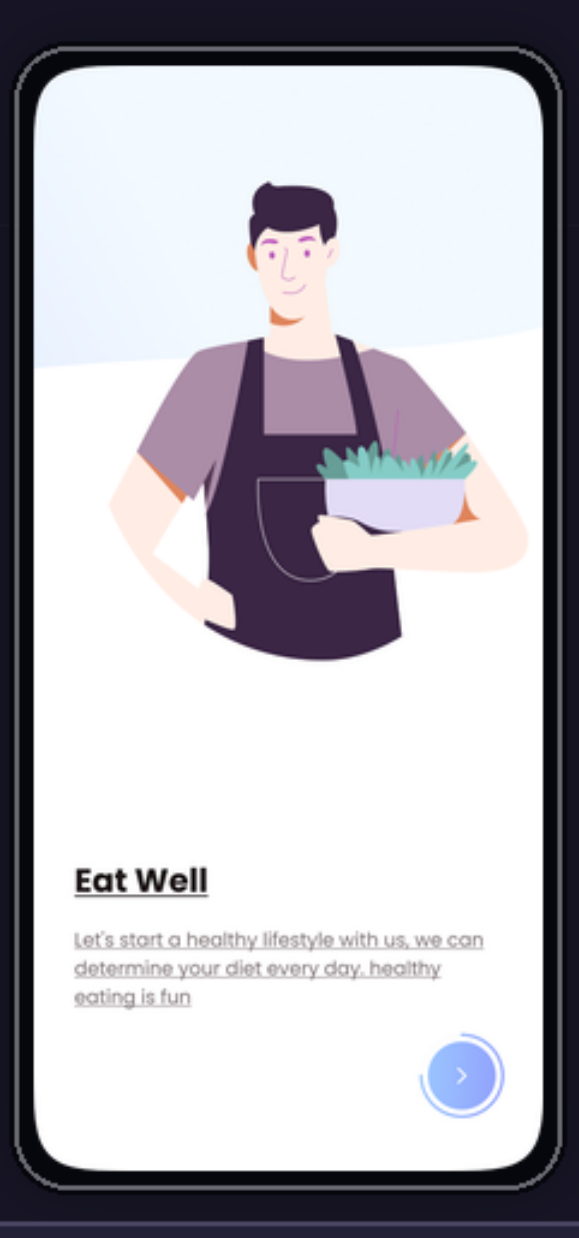


Get Burn

Let's keep burning, to achive yours goals, it hurts only temporarily, if you give up now you will be in pain forever

MOVEMENT

Keep activity messaging encouraging and inclusive.



Eat Well

Let's start a healthy lifestyle with us, we can determine your diet every day. healthy eating is fun

NUTRITION

Use plain language and avoid one-size-fits-all assumptions.

UX FOCUS Check whether users can explain each screen, identify their goal and predict what happens after continuing.

05 / Account access

Registration and login use familiar form patterns; the UX focus is confidence, error prevention and recovery.

ACTION & FEEDBACK

Clarify primary navigation and confirm when an activity is saved, edited or undone.

07 / Personal progress & profile

Profile and progress-photo screens extend the experience beyond a single workout.

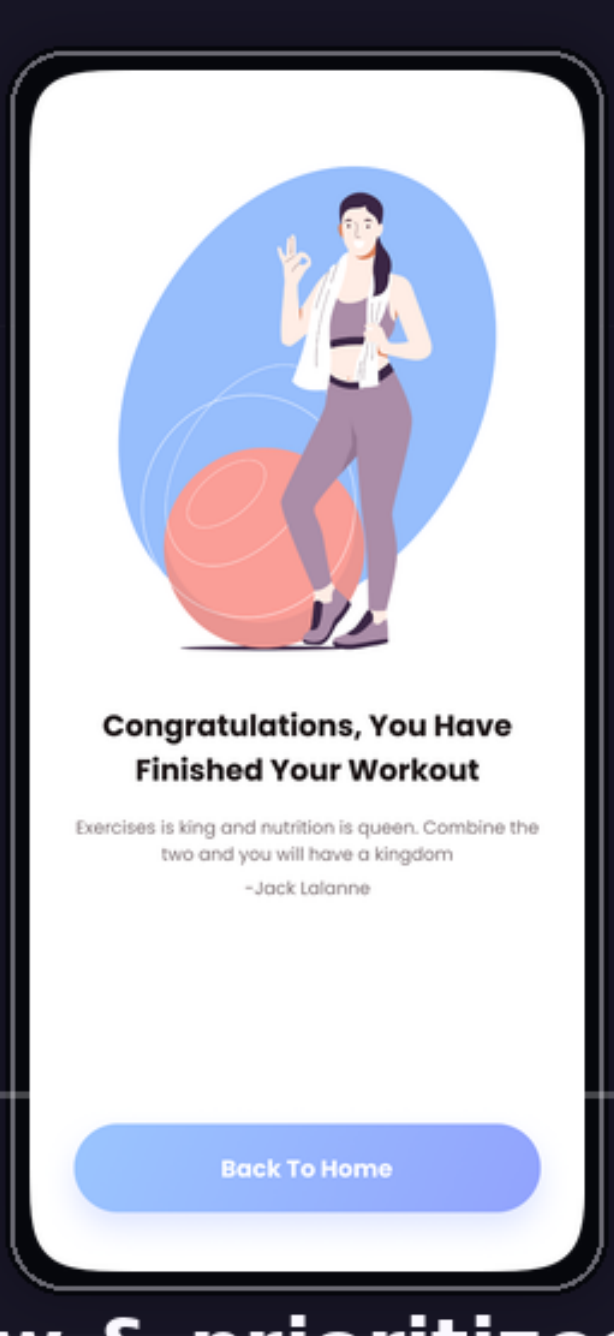
ACCESSIBILITY & INCLUSION

Check text contrast, scalable type, touch targets and status cues that do not rely on colour alone.

08 / Workout completion

A positive end state closes the loop by confirming completion and offering a clear next step.



Congratulations, You Have Finished Your Workout
Back To Home

Exercises is king and nutrition is queen. Combine the two and you will have a kingdom

-Jack Lalanne

DESIGN INTENT

Confirm what was completed, communicate whether progress was saved and make the next action easy to find.

09 / UX review & prioritized opportunities

Design review observations and hypotheses to validate—not claims of completed user testing.

P1 · TARGET CLARITY

Define units, time range, progress state and what counts toward each daily target.

P1 · NAVIGATION

Test whether tab labels and the central action are understandable to first-time users.

P1 · ONBOARDING

Validate goal comprehension and whether users know what to do next.

P2 · FEEDBACK

Confirm activity save states and provide a clear edit or undo route.

P2 · PRIVACY

Explain progress-photo storage, sharing, retention and deletion.

P2 · ACCESSIBILITY

Review contrast, text scaling, touch targets and screen-reader names.

10 / Validation plan

Validate the highest-risk assumptions before making claims about usability or impact.

USABILITY TASKS

1. Create an account or sign in.
2. Explain a selected goal in their own words.
3. Find and interpret today's targets.
4. Log an item and confirm it was saved.
5. Find progress photos and explain privacy expectations.

MEASURES

- Task completion and time on task
- Errors, backtracks and help requests
- Target comprehension
- Perceived ease after each task
- Privacy understanding and confidence

SUCCESS MEASURES Agree thresholds before testing and report results only after sessions. No participant findings or impact metrics are claimed.

11 / Reflection & next steps

The case study connects interface decisions to user needs and a plan for validating the experience.

DESIGN OUTCOME

A connected screen set and a prioritized UX review covering clarity, navigation, feedback, accessibility and privacy.

NEXT ITERATION

Validate the journey with representative users, prioritize observed issues and measure task success over time.
